

Elaboration of criterion assessment system: The contribution to the integration of the wind farm into the Dutch energy system;

Regulations for granting permits for offshore wind energy lot **VII** Hollandse Kust (west)
Sept. 7, 2022

In the context of assessing the contribution to the integration of the wind farm into the Dutch energy system, RVO wishes to obtain insight into the quality in investments and innovations of each application within Lot VII or on Dutch territory for the contribution to the integration of the wind farm into the Dutch energy system as described in the Regulation of the Minister of Economic Affairs and Climate of March 9, 2022, no. WJZ/ 21196433, containing further rules for the licensing of wind energy at sea for the Lot VII of the wind energy area Hollandse Kust (west).

1 Stimulating investments for the benefit of the integration of the wind farm on Lot VII into the Dutch energy system (max 70 points)

Qualitative measures	Assessment measure	Ptn. Regulation	Further subdivision	Supplemental
The investment, and immediately related resources, that contributes to increasing scalable flexible demand consistent with the delivery profile of Lot VII Geographic distance from the landing point is not taken into account. The investment is carried out on Lot VII or Dutch territory. The investment must be put into operation no later than 60 months after the permit becomes irrevocable.	Potential impact of investment on integration of wind farm on Lot VII of Hollandse Kust (west)	60	40	Plausibility and consistency of the three assessment measures are considered.
	The extent to which it is plausible that the investment can be successfully applied in an operational environment		10	
	The extent to which it is understood what specific, measurable and time-bound progress the investment will have and how it will be monitored and communicated upon implementation of the investment		10	
The extent to which it is understood what specific, measurable and time-bound progress the investment will have and how it will be monitored and communicated upon implementation of the investment	The extent to which knowledge and experience is shared that contributes to knowledge gaps or occurs in close coordination with or facilitates existing research*	10	5	
	The quality of a dissemination and communication plan, including the extent to which the dissemination and communication plan describes the knowledge to be shared, specifically, measurably and time-bound; and the extent to which the target audiences have been named and the dissemination communication tools match them		5	

*Clarified to: The extent to which knowledge and experience is shared that contributes to knowledge gaps or takes place in close coordination with existing research or facilitates existing research.

2 Encouraging innovation for the benefit of integrating the wind farm on Lot VII, already existing and future offshore wind farms into the Dutch energy system
(max 30 points)

Qualitative measures	Assessment measure	Ptn. Regulation	Further subdivision	Supplemental
The demonstration of innovation that helps increase scalable flexible demand consistent with the delivery profile of Lot VII For any demonstration, at least a prototype in an operational environment (TRL7) in the form of a pilot must exist at the time of the demonstration. The demonstration must begin no later than 60 months after the permit becomes irrevocable. The geographical distance to the landing point will not be taken into account. The demonstration shall take place on Lot VII or Dutch territory.	Potential impact of the innovation on the integration of the wind farm on Lot VII of Hollandse Kust (west) and offshore wind farms in the future if the innovation is made market-ready	20	10	Plausibility and consistency of the four assessment measures are considered.
	The degree to which the innovation is innovative and inventive compared to the best currently available on the market in terms of products, services or processes		2	
	The extent to which it is plausible that the innovation can be successfully demonstrated in an operational environment		2	
	The extent to which it is understood what specific, measurable and time-bound progress the demonstration will have and how it will be monitored and communicated upon implementation of the innovation		6	
The extent to which knowledge, experience is shared about the innovation being demonstrated	The extent to which knowledge and experience is shared that contributes to knowledge gaps or takes place in close coordination with or facilitates existing research.*	10	5	
	The quality of a dissemination and communication plan, including the extent to which the dissemination and communication plan describes the knowledge to be shared, specifically, measurably and time-bound; and the extent to which the target audiences have been named and the dissemination communication tools match them		5	

*Clarified to: The extent to which knowledge and experience is shared that contributes to knowledge gaps or takes place in close coordination with existing research or facilitates existing research.

Indicative values on a continuous scale from 0 to 100 in percent for the criteria

indicative intermediate values on a continuous scale	
Excellent, value-added	100%
Very good, with some added value	90%
Good	80%
Ample	70%
Sufficient	60%
Moderate	50%
Insufficient	40%
More than insufficient	30%
Bad	20%
Very bad	10%
